**Task 7: Interactive Web Form with Events & Functions**

**Aim:** To develop an interactive feedback form system using HTML, CSS, JavaScript, Node.js, and MySQL that performs real-time input validation, enhances user interaction (hover + double-click), and securely stores feedback data in a database**.**

**Algorithm :**

1. Start
2. Display feedback form (Name, Email, Message)
3. User enters input
4. Validate inputs on keypress
5. Highlight fields on mouse hover
6. On double-click submit:
    - Collect form data
    - Check all fields are valid
7. Send data to backend (POST request)
8. Server validates input again
9. Insert data into MySQL database
10. Send response to frontend
11. Display success or error message
12. End

**Program:**

**Index.html**

```
<!DOCTYPE html>
<html>
<head>
  <title>Feedback Form</title>
  <link rel="stylesheet" href="style.css">
</head>
<body>
<div class="container">
  <h2>Customer Feedback</h2>
```

```
    <input type="text" id="name" placeholder="Name"
        onkeypress="validateName()" onmouseover="highlight(this)">
    <input type="email" id="email" placeholder="Email"
        onkeypress="validateEmail()" onmouseover="highlight(this)">
    <textarea id="message" placeholder="Message"
          onkeypress="validateMessage()" onmouseover="highlight(this)"></textarea>
    <button ondblclick="submitForm()">Double Click to Submit</button>
    <p id="status"></p>
</div>
<script src="script.js"></script>
</body>
</html>
```

**Style.css**

```
body {
    font-family: Arial;
    background: #f4f4f4;
}
.container {
    width: 400px;
    margin: 50px auto;
    padding: 20px;
    background: white;
    border-radius: 10px;
}
input, textarea {
    width: 100%;
    margin: 10px 0;
    padding: 10px;
    border: 1px solid #ccc;
}
```

```
input:hover, textarea:hover {
   border-color: blue;
   background: #eef6ff;
}
button {
   width: 100%;
   padding: 10px;
   background: green;
   color: white;
   border: none;
   cursor: pointer;
}
```

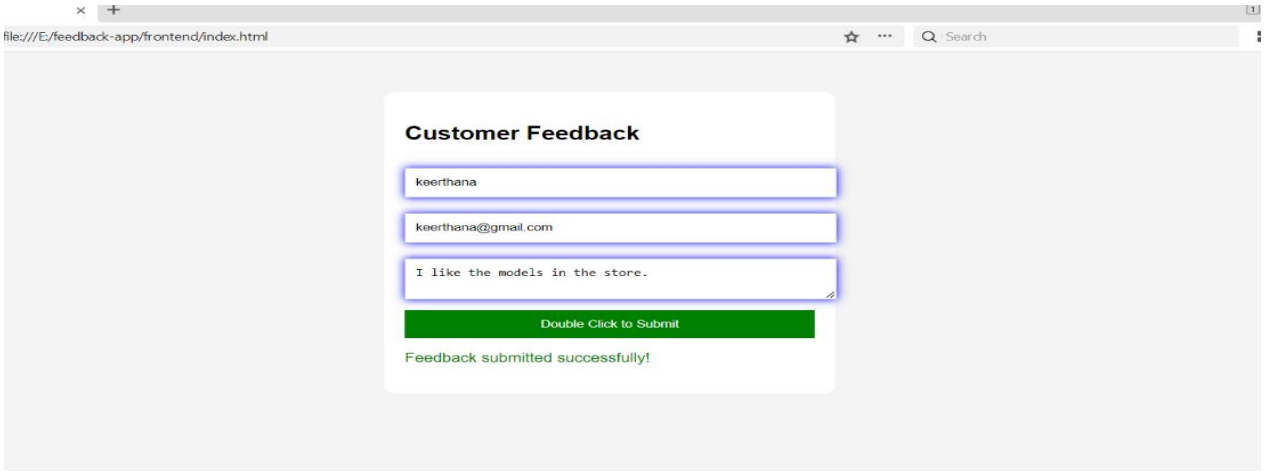
**Script.js**

```
function validateName() {
   let name = document.getElementById("name").value;
   if (name.length < 3) {
      showStatus("Name must be at least 3 characters", "red");
   } else {
      showStatus("", "");
   }}
function validateEmail() {
   let email = document.getElementById("email").value;
   let regex = /^[^\s@]+@[^\s@]+\.[^\s@]+$/;
   if (!regex.test(email)) {
      showStatus("Invalid email format", "red");
   } else {
      showStatus("", "");
   }}
function validateMessage() {
   let msg = document.getElementById("message").value;
   if (msg.length < 10) {
```

```
        showStatus("Message too short", "red");
    } else {
        showStatus("", "");
    }}
// hover highlight function
function highlight(el) {
    el.style.boxShadow = "0 0 10px blue";}
// status display helper
function showStatus(msg, color) {
    let status = document.getElementById("status");
    status.innerText = msg;
    status.style.color = color;}
// submit on double click
async function submitForm() {
    let data = {
        name: document.getElementById("name").value,
        email: document.getElementById("email").value,
        message: document.getElementById("message").value
    };
    const res = await fetch("http://localhost:3000/feedback", {
        method: "POST",
        headers: { "Content-Type": "application/json" },
        body: JSON.stringify(data)
    });

    const result = await res.json();
    if (result.success) {
        showStatus("Feedback submitted successfully!", "green");
    } else {
        showStatus("Submission failed", "red");
    }}
```

**Output**:



**Result:**

The interactive feedback form was successfully developed.
User inputs are validated in real-time, fields are highlighted on hover, and feedback is submitted using double-click. The data is stored in the MySQL database, and a confirmation message is displayed after successful submission.
